Financial CSVs
VIX, Nikkei, S&P500, US10Y, USDJPY (LSEG daily, filter ≥ START_DATE)
JGB Yields
jgbcme_all.csv (parse Shift-JIS, extract 10Y col, filter)
Macro Data
REER.xlsx, RGDP.csv, Nominal GDP.csv, WUI.csv (mixed freq., filter)
BOJ Pre-2014
6pi-1 CSV (Shift-JIS) parse Japanese eras, extract equity, debt flows
BOJ Post-2014
API CSVs (lt debt, st debt, equity, other, direct) simple 2-col format
Build Daily Dataset
VIX as anchor, left_join all daily series
Financial Transformations
risk_off = VIX ≥ MA60+10
spread = JGB10Y − US10Y
log_nikkei
Macro Logs
log_reer, log_rgdp, log_wui (zero guard)
Merge Capital Flows
bind pre & post, debtsec = lt_debt + st_debt
Capital Flow %GDP
USDJPY end-of-month rates, nominal GDP carry forward, convert to USD bn → %GDP
Export: Re-read Raw Files
(no START_DATE filter) logs and %GDP computed, uses parsed 6pi-1 data
Working-Day Filter
keep Mon-Fri from START_DATE to END_DATE
Python Quadratic Interpolation
(pandas, no extrapolation)
Merge All Variables
10 series full_join by date, assign period flag (1999-2021 / 2021-2026)
Import Daily Interpolated
log_reer, log_rgdp, log_wui, debtsec_pct, equity_pct, other_pct, direct_pct
Export Final Dataset
final_dataset.csv
Re-reads raw macro, BOJ API, and US-DJPY files (no START_DATE filter) plus uses already-parsed 6pi-1 dataframes from step above.
Raw data source
Transformation / computation
Dataset building / merging
